FAIR SUCCESSES START WITH THE PREPARATIONS

Being at a trade fair always involves a lot of organisational work - and therefore time and money. With smartaffairs, you can concentrate purely on your personal fair matters. As your strong partner, we organise everything else you otherwise need:

Incoming / Hotel reservations

Ticket information at www.shkessen.de.
DB ticket is valid for free entry at the ticket office.

7 – 10 MARCH 2012
DISCOVER THE FUTURE

Benelux Day
7 March 2012

Welcome to the SHK Essen 2012

We're looking forward to welcoming you to the SHK in Essen - the trade fair for sanitation, heating, air conditioning and renewable energies.

The SHK Essen is the forum for industry, crafts, trade and expert planners. About 530 exhibitors are again offering you this year a comprehensive market overview of the latest technical developments and their applications. Obtain information directly from the manufacturer and discuss with experts.

Use the crucial added value of the SHK Essen 2012!

We're looking forward to your visit!

The SHK Essen 2012 online

The SHK offers you a comprehensive information and service platform on the Internet at www.shkessen.de. Find all the exhibitors, events and all the themes - they are presented in a well-structured layout - and order your entrance tickets directly online. On the road you can access the relevant facts and information in real time using the SHK app.

7 March 2012 Benelux Day

Open borders and a single currency have brought us closer together with our western neighbours. However, we do not look over the border enough. There is really a lot to discover - for example the attractive offer of famous companies at the SHK Essen.

Meet the professional and multilingual contacts from all segments of the SHK branch on Benelux Day. Use this opportunity and expand your horizon for innovations, products and contacts.

The bathroom as a living space: Focus on sustainability

The brand manufacturers in the sanitary installation industry have committed themselves in a particular way to the responsible handling of the resource water. Great emphasis is placed here on sustainability. This not only relates to water and energy-efficient products but also to environmentally friendly production, the selection of the right materials and the use of high-tech processes.

The German sanitary installation industry will be showing its latest developments and technologies to take on this responsibility at the SHK Essen 2012. Discover the possibilities.

Planning Forum

The Planning Forum at the stand of the NRW Trade Association for Sanitary Installations, Heating and Air Conditioning in hall 2 offers you concentrated know-how, packed in brief papers of well-known speakers. Benefit from expert knowledge on the subjects of „Consequences arising from the 2011 drinking water regulations“, „Cogeneration - a technology asserts itself“, „The ventilation concept as an opportunity in advising customers“ - or learn more about branch activities in the field of „Heating/Renewable energies“. Use the concentrated information and join in the discussions. Plant operators should pay attention: do not miss the special papers at the Planning Forum on Saturday morning tailored for you.

Market opportunities for mini/micro combined heat and power plants and renewable energies

Cogeneration in the micro-segment is widely regarded as a trail-blazing technology. All the units currently available will be presented at a special exhibition in hall 2 on heating technology with dual benefits. You will also have the opportunity to pose questions to the SHK professional on fields of application, cost-effectiveness and requirements. You can also obtain information on the first nationwide cogeneration long-distance study course „SHK power specialist“.

Everyone is talking about the „turnaround in energy“. Since the introduction of the Renewable Energies Heat Act (EEWG), branch professionals and end customers are confronting new requirements and possibilities. We invite you to obtain information on the state of the art of environmentally friendly efficiency technologies.
